CONESTOGA 2

Patented Wheel And Track System

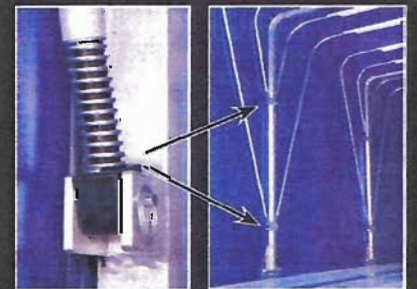

Introducing an all-new easy to operate rolling tarp system for carriers, developed by Aero Industries and Jerr-Dan Corporation. Based on Aero[®] Industries Conestoga 2[®] system, the Jerr-Dan rolling tarp system features an innovative design that easily covers and uncovers a carrier deck in seconds. Instead of having to climb over the carrier deck and tie down a tarp, the driver can walk alongside and cover a vehicle in seconds.

The Jerr-Dan Conestoga 2, by Aero Industries saves time, boosts productivity, and enhances profitability. Other key features include:

1. **A Patented Wheel And Track System** – featuring a lifetime wheel warranty – where steel wheels and a stainless steel track insert work to smooth out the process of opening and closing. The solid wheel bearings are maintenance free. A built-in patented bump rail protects track from forklifts and other loading hazards and automatically ensures watertight seal for the tarp.
2. **A Rear-Locking System** that increases the tarp's tension while securing the load from ground level, for safe and smooth operation. Unlike other designs, all lock components travel with the rear bow assembly and there are no cumbersome loading obstructions and no hardware to remove or store.
3. **A Patented System Of Spring Shocks** on the uplift bows reduce vibration from road conditions, keeping the tarp tight and reducing wear on the uplift bows. A strong, coated vinyl tarp, available in several colors, that works without cables provides a tight, seamless cover.
4. **A 30" Rear Bow Assembly** adds stability to the system, slides easily, and will not flex while opening and closing the system. The front of the system is fastened to a US DOT rated bulkhead.
